### 2.5.1 Front View of SPC-7000/7100/7200 Main Board With Jumper Location

The figure below is the top view of the EMBC-5000 main board. It shows the location of the jumpers.

You may configure your card to match the needs of your application by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To "close" a jumper, you connect the pins with the clip. To "open" a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2, and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

## 2.5.2 JP1 : Power Selection for LVDS Module

Pin No.	Definition
1	Ignition (IGN)
2	SW+
3	SW-

For testing purpose, you can refer to the picture blow to simulate ignition signal input controlled by a latching switch.

Note :

1. DC power source and IGN share the same ground.
2. SPC-7000 series supports 9V to 55V wide range DC power input in ATX/AT mode. In Ignition mode, the input voltage is fixed to 12V/24V for car battery scenario.
3. For proper ignition control, the power button setting should be "Power Down" mode.

In Windows for example, you need to set "When I press the power button" to Shut down.

## APPENDIX C : RAID Functions

The 11th Generation Intel processors (Intel Tiger Lake) utilizes the new Intel Volume Management Device technology, which optimizes the storage devices' data processing effectiveness and power consumption.

When you install Windows 10 retail or enterprise version, both need to load the IRST driver so Windows can detect a storage drive.

The steps below are required to set up and configure HW/BIOS supported systems for Intel® RST storage management through Intel® VMD. This is only a reference for system vendors and expert users. You also can refer to [the statement of Intel](#).

### C.1 Access BIOS Settings

1. Boot the system and press the Delete key as soon as you see the AMI BIOS Logo to enter the BIOS setup.
2. Chipset → System Agent (SA) Configuration → VMD setup menu

### 3. VDM Configuration

- a) Change the setting on "Enable VMD controller" to Enabled
- b) Change the setting on "Enable VMD Global Mapping" to Enabled

4. Save Changes and Reset. When asked if you want to save changes, click "Yes".

5. Access BIOS menu again, select Intel(R) Rapid Storage Technology.

6. Select Create RAID Volume on BIOS menu.

7. Select disks to create RAID Volume then Save Changes and Reset to install OS with UEFI mode.

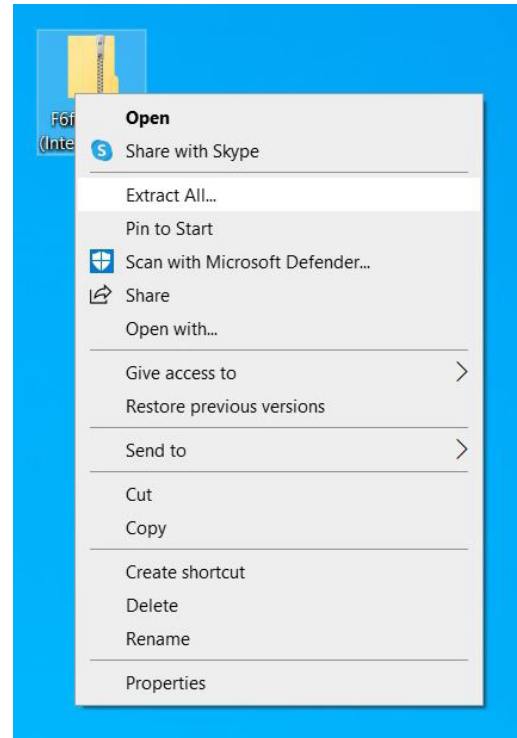

## C.2 OS Installation

The system is featured with three SATA, include two internal SATA, and one M.2 Key B (3052) storage.

We take two SATA for Windows 10 OS installation as an example.

1. Please download "Intel Rapid Storage Technology (IRST) driver", Download Link from Intel website. [Intel® Rapid Storage Technology Driver Installation Software with Intel® Optane™ Memory](#)

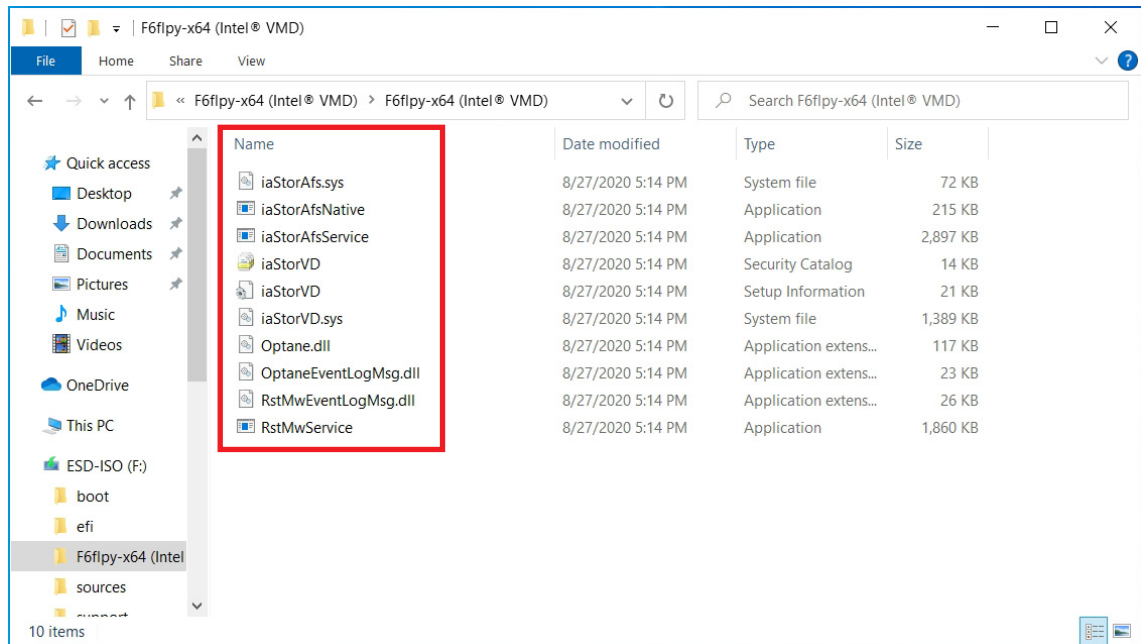

2. After downloading the driver, right-click [F6flpy-x64 (Intel® VMD).zip] compressed file and select [Extract All].

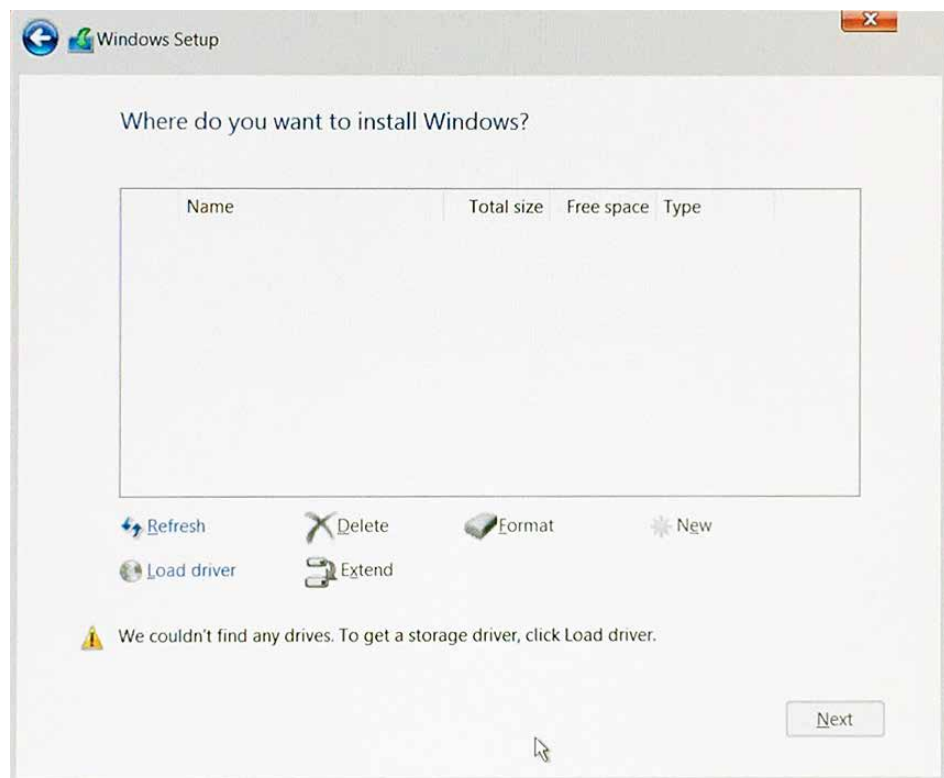

3. Unzip the file you download and save the files to the Windows 10 USB drive you created.

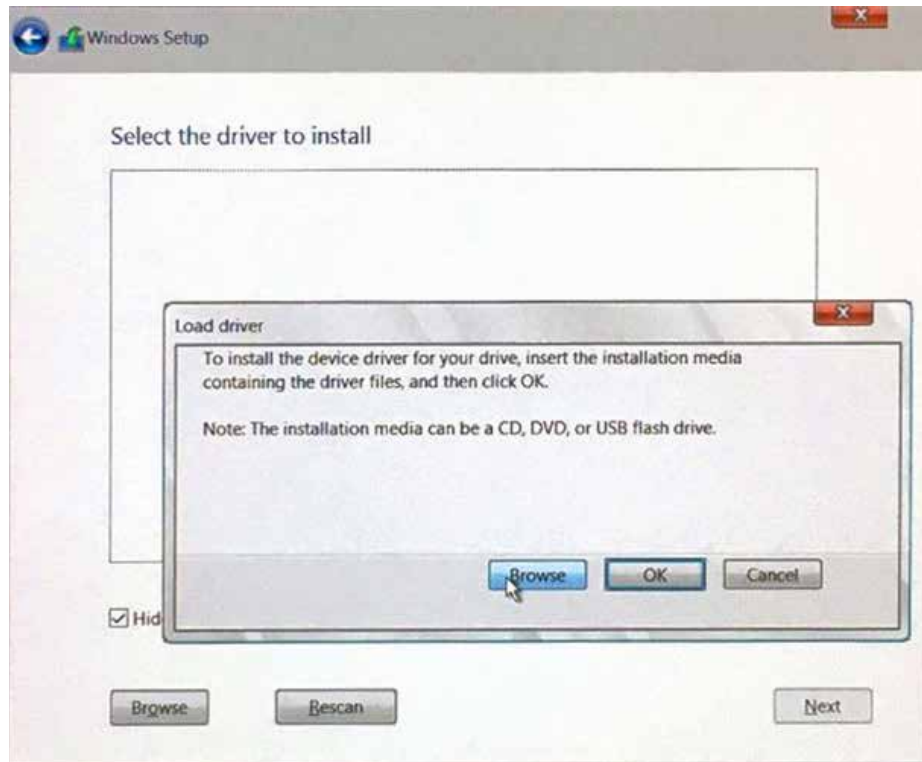

4. After the copying is completed, make sure the folder includes the following files.

5. Select Windows 10 USB drive to enter Windows 10 setup interface Follow the installation instruction, the system should enter the storage setting interface, the bottom of the screen should display a message "We couldn't find any drives. To get a storage driver, click Load driver."

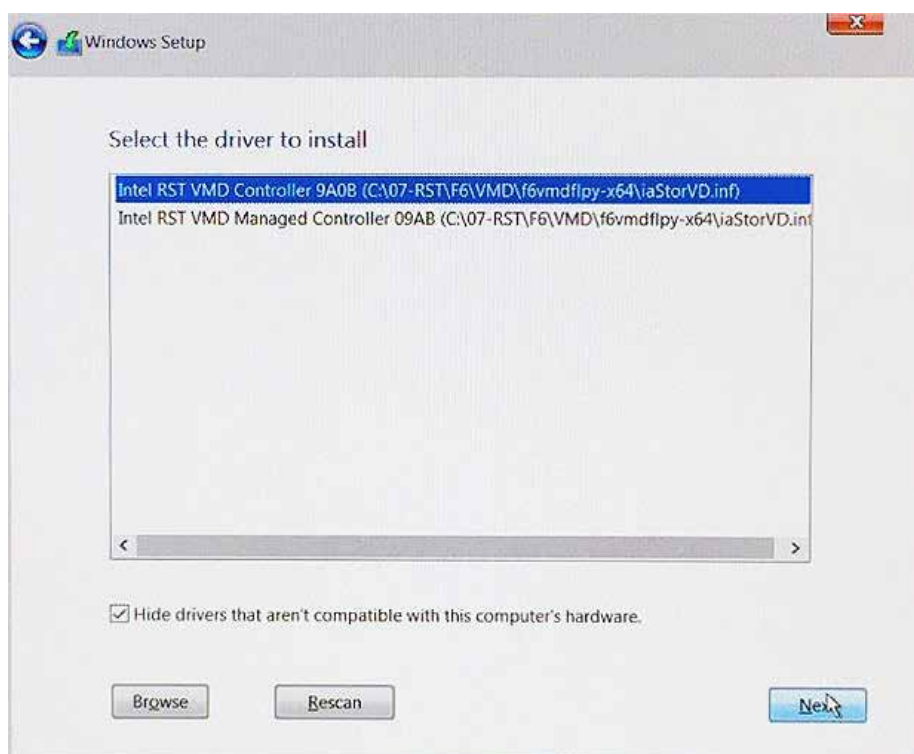

6. Click on Browse icon.

7. Select Intel VMD driver folder which has been saved in, then click on OK to continue the process.

8. Select the top driver, and then click on Next button to continue the process.

9. Windows 10 OS will automatically install the Intel VMD driver, after the process is complete, you will see the list of all drives and partitions on your computer. You can choose to "Refresh", "Format", "Delete" the available drives then click on Next to continue the Windows 10 installation process.

Note : This issue should be resolved in Windows 10 ver. 20H2, which will include the Tiger Lake IRST driver.

## **C.3 To Install All Device Drivers of the System**

The instructions are as follows :

1. To install Chipset driver
2. To install Graphics driver
3. To install ME driver
4. To install SerialIO driver
5. To install Network driver
6. To install Audio driver
7. To install Intel® Rapid Storage Technology Driver Installation Software with Intel® Optane™ Memory driver

## **C.4 To Install "Intel® Rapid Storage Technology Driver Installation Software with Intel® Optane™ Memory"Software**

You can get the software on the driver CD.

Also, you can find the latest information and software directly from Intel website.

<https://www.intel.com/content/www/us/en/support/products/99745/memory-and-storage/intel-optane-memory.html>

The RAID environment has been done if you completed the steps above.

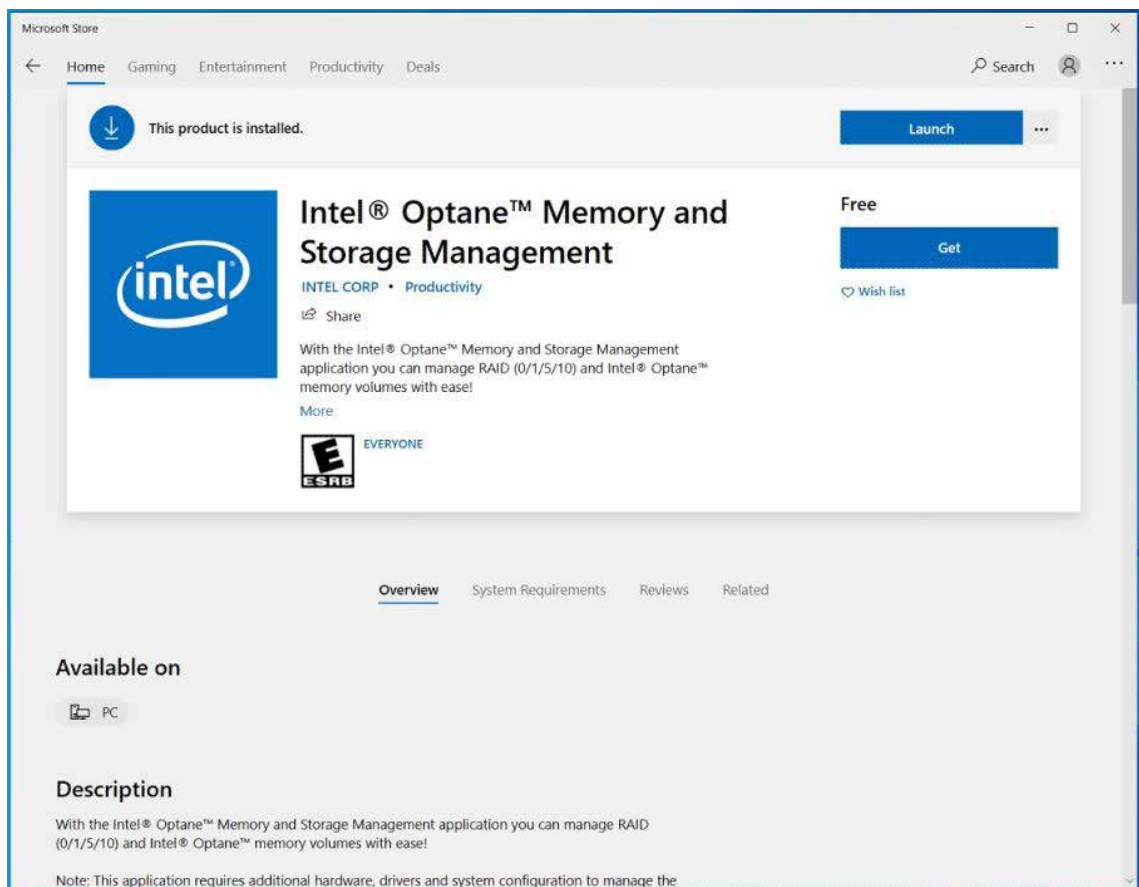

## **C.5 To Insert SATA HDD/SSD for RAID 1**

Please notice, you can use two SATA ports for SATA storage devices.

## C.6 To get Intel® Optane™ Memory and Storage Management application

The Intel® Optane™ Memory and Storage Management application/user interface is a Microsoft Store\* app. It provides users with monitoring and management capabilities for the Intel® Rapid Storage Technology (Intel® RST) storage subsystem, [Download Link](#).

Note : The Intel® RST Driver is required to be installed before installing the application, read more [here](#).

## C.7 Intel® Optane™ Memory and Storage Management User Interface

The volume will be shown in the OS-related applications, and it will display Pass-through SATA and PCIe disks, Empty SATA ports, RAID volumes, and Intel® Optane™ memory volumes.

The following guide link can assist you when managing Intel® Optane™ memory devices.

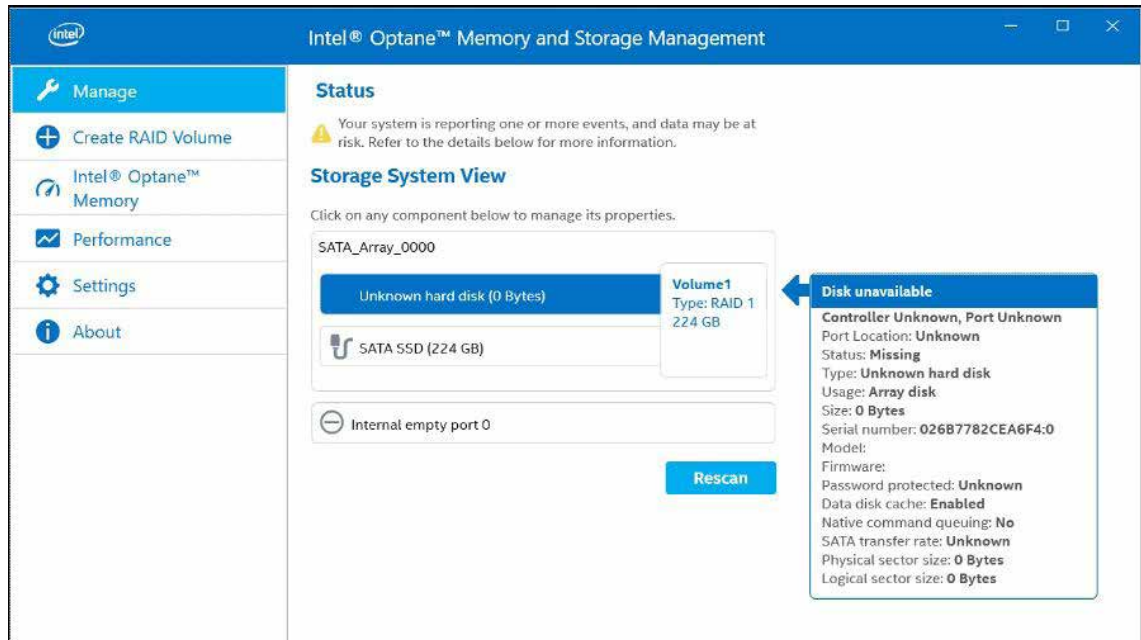

[Intel® Optane™ Memory Installation and User Guide](#)

## C.8 If one of the hard drives has failed and needs to be replaced

The Intel application will have a screen that indicates the status of the member drives and will let you know which port has the failed drive.

## C.9 Recovery and Auto Rebuild When Use the SAME RAID HDD/SSD

Open the Intel® Optane™ Memory and Storage Management User Interface to start will automatically rebuild a RAID volume after replacing the failed hard drive with a new hard drive of equal or larger size. This can take 1 - 3 hours to complete.
